Advisor: Paul Sajda

- Developed a state-space model algorithm for predicting the instantaneous phase of local field potential rhythms in real time.
- Devised multimodal neural network models that utilize features from volumes of optical coherence tomography angiography images for diagnosing neovascular age-related macular degeneration.

- Designed the first recurrent neural network model for ballistocardiogram (BCG) artifact suppression in simultaneous EEG-fMRI recordings that significantly outperformed the current state of the art.
- Implemented an open-source Python toolbox called BCGNet for users to train neural network models for suppressing BCG artifact.
